Division of Marketing
John D. Stiles, Director

Cooperating with

U. S. Department of Agriculture
Statistical Reporting Service

Acknowledgment

The acreage, production, utilization, monthly and season average price, and crop value statistics for Florida are official estimates of the Florida Crop and Livestock Reporting Service. Corresponding data for other citrus states are from official reports of the USDA, Statistical Reporting Service. Canned and frozen pack statistics were compiled by the Florida Citrus Processors Association. Where data are from other sources, appropriate references appear.

Records of the Division of Fruit and Vegetable Inspection, Florida Department of Agriculture and Consumer Services, were employed in production and utilization estimates. The Citrus Administrative Committee assisted in assembling these data.

Many producers, shippers, canners, sales agencies, transportation firms, and others associated with the citrus industry voluntarily supplied basic data used to develop these statistics. Their contributions are sincerely appreciated.

The report was assembled under the direction of James W. Todd and Robert R. Terry of the Florida Crop and Livestock Reporting Service.

FLORIDA WEATHER HIGHLIGHTS, SELECTED AREAS AND MONTHS, 1980-81 CROP YEAR

CENTRAL FLORIDA

The 1980-81 season was continuously cold from mid December through the early part of February. The remainder of the November-March period was mild. Citrus trees were in their dormancy by the end of year. January brought a number of cold nights, with a major freeze on the 13th and 14th. Rainfall for the season was substantially below normal. By the end of March considerable supplemental irrigation was needed for citrus.

NOVEMBER: This was a fairly normal month, with many warm days and few cold nights. The first three weeks, night readings were recorded mostly in the 50's and low 60's. There were a few nights when temperatures dropped to the 40's. The first strong cold front moved through on the 27th. Temperatures dropped into the 30's on the 29th and 30th. Rainfall for the month averaged 3-5 inches.

DECEMBER: The first ten days of the month were above normal. A cold front on the 11th changed the weather pattern with the remainder of the month below normal. From the 12th to the 19th, lows were in the mid 30's and mid 40's and again from the 26th through the 31st, night temperatures were in this same range. Rainfall for the month averaged from 1-2 inches.

JANUARY: This month was extremely cold. All but five nights qualified as "cold nights". The first six days of the month continued cold from the front of late December. Lows were mostly in the 30's. Some pockets had durations below 28 degrees up to 4 to 6 hours. The morning of the 7th, temperatures were mostly in the 40's ahead of a rapidly moving cold front. Readings on the 8th to the 12th again dropped into the 30's and upper 20's. An active high pressure system dropped southward to reinforce the already cold air over the State. On the 13th, durations were below 28 degrees for 9 to 13 hours. Many spots were 20 degrees and below for 4 to 8 hours. On the 14th, durations below 28 degrees ranged from 6 to 10 hours. Another mass of cold air moved through the State on the 18th and 19th dropping lows to the 20's. The remainder of the month was cold, in the 30's and 40's, but most readings were above freezing. Rainfall ranged from 1/2-1 inch.

FEBRUARY: Coldest readings during the month were recorded from the 3rd to the 6th and 12th with upper 20's to mid 30's. Most of the other nights were in the 40's. Rainfall averaging 3-5 inches occurred mostly early in the month with no rain recorded after February 19.

MARCH: The month averaged about 3 degrees below normal. The first two weeks were cool with many nights in the 40's. On the 15th, 17th, 20th and 21st, readings were in the 30's at night. Minimum temperatures gradually warmed up to the 60's by the end of the month. Rainfall averaged 1-3 inches with most of the rain on the 22nd and 23rd.

SOUTH FLORIDA

The 1980-81 season was very cold. Both the Everglades and the Indian River District had the second greatest number of "cold nights" since records began. January was extremely cold through the entire month. Coldest mornings were on the 13th, 14th, and 19th when readings fell into the 20's. Durations below freezing averaged four to eight hours on each of these nights. Late December as well as February and March were rather cold. Rainfall for the season was below normal.

NOVEMBER: Lows for the first 28 days of the month were in the 50's and 60's. A few cool nights had lows in the upper 40's over the Interior. On the 29th and 30th lows fell into the 40's with a few 30's in the colder locations. The East Coast stayed near 50. Rainfall ranged from 3-5 inches, except for 5-6 inches along the Southeast Coast.

DECEMBER: The first 11 days of the month lows were mostly in the 50's. A succession of cold fronts for the remainder of the month kept lows in the 40's to low 50's in the Glades and mostly 50's to low 60's along the Southeast Coast. A strong cold front moved through on Christmas Day with lows the remainder of the month in the upper 30's and 40's. Rainfall averaged 1-2 inches.

JANUARY: Lows ranged from 30's to 40's during the month except for the 13th, 14th, and 19th when readings in many locations dropped to the 20's. A cold, high pressure system settled over the State at the beginning of the New Year. Temperatures dropped to freezing or a little below over the Indian River and Glades areas for the first time of the season. Cool readings continued for the next week and a half with lows mostly in the 40's. This was followed by an even colder period from the 11th through the 15th with the 13th and 14th being the lowest-in the upper 20's and 30's in the Glades and the Indian River District with 30's and 40's along the Lower East Coast. Temperatures warmed slightly on the 16th and 17th with another front dropping temperatures on the 18th to 20th. The night of the 19th was the coldest. The remainder of the month the nights were around the 40's in the Glades and low 50's along the Southeast Coast. Rainfall for the month was generally 1/2 to 1 inch.

FEBRUARY: Temperatures on the 4th fell below freezing in the Glades and Indian River but the lower East Coast area remained in the mid to upper 30's. From the 7th to the 21st the low readings were in the 50's to 60's. A cooler period occurred the last week of the month with temperatures in the mid to upper 30's except on the lower East Coast where 40's were reported. Rainfall ranged from 1 1/2 to 3 1/2 inches.

MARCH: The month was cooler than normal with lows the first three weeks mostly in the 50's and occasionally in the 70's at night. On the 21st, readings fell into the 30's. Afterwards there was a slow warming trend. Rainfall for the month averaged 1-2 inches.

1980-81 PRODUCTION SUMMARY

Florida's 1980-81 season began with first bloom showing by mid March despite freezing temperatures on March 3, in the historically cold areas. It was feared that the low temperatures would reduce the amount of bloom because of small twig damage, but a good bloom was experienced in all areas.

Post bloom weather was very dry until the usual summer rain period which began in the end of May and extended into September. Fall weather was dry except for some rain preceding cold fronts in late November.

January 1981 weather was very similar to conditions that prevailed during January 1977 when several days of sub-freezing temperatures in the citrus producing areas of the State resulted in major damage to oranges and specialty crops. A detailed description of the freeze events is on the preceding weather highlights page.

Damage to oranges in the 1977 and 1981 freezes appeared to be similar. Approximately 15 percent of the pre-freeze forecasted boxes of oranges were lost in both years. However, the 1977 freeze affected fruit to some extent in most producing areas of the State, whereas the 1981 freeze left fruit unaffected in major portions of the East Coast and Lower Interior growing areas. This resulted in less loss of juice on the State level in 1981 than in 1977. The final FCOJ yield for 1981 at 43.4 degrees Brix was 1.20935 gallons per box compared to 1.11673 gallons per box in 1977, at the comparable Brix level.

Final orange production at 172,400,000 boxes, was 15 percent less than the initial October forecast of 203,000,000 boxes. This was 17 percent less than the 206,700,000 boxes produced in the 1979-80 season, but still more than the 1977-78 and 1978-79 seasons.

Grapefruit production at 50,300,000 boxes, was 8 percent less than the record 54,800,000 boxes produced in the 1979-80 season. Loss of fruit from the freeze however, was minimal. Specialty crop production with the exception of K-Early's, limes and lemons was greatly reduced by the freeze.

Citrus trees in the Upper Interior, West Coast and portions of the Lower Interior growing areas suffered varying degrees of damage because of the freeze. The lower minimum temperatures and longer durations produced more tree damage than the 1977 freeze. This damage ranged from completely killed trees in low ground, historically cold areas to light defoliation. Heavy pruning, even to the scaffold level, was necessary.

California's orange crop set a record for the second season with 66,250,000 boxes produced, 12 percent more than the previous season's 59,400,000 boxes. The major increase was in Navel. Grapefruit production was only slightly higher than the previous season but lemon production set a record with 24,800,000 boxes produced.

Arizona orange production was the lowest in many seasons primarily due to declining acreage. Grapefruit production was only slightly less than last season but lemon production, at 7,000,000 boxes, was substantially greater than the previous season.

Texas orange production, at 4,330,000 boxes was only slightly greater than last season, but still less than recent years' production levels. Bearing acreage has been declining since 1972. Grapefruit production, at 6,700,000 boxes, has been declining since the high 1976-77 season when 12,400,000 boxes were produced.

TREE CENSUS

The Florida Crop and Livestock Reporting Service first began indexing the State's commercial citrus groves on aerial photography as of January, 1966. Ground crews in 4-wheel drive vehicles identify all the State's groves by year in which set, fruit type, and row spacing. Photo interpreters in the Orlando office then delineate the groves by variety blocks on positive photo transparencies at a scale of 1 inch to 600 feet. Variety blocks are measured with planimeters to obtain acreage and then indexed by land section.

The 1966 survey indicated there were 66,441,000 commercial citrus trees on 858,082 net acres of land. In addition, the survey provided acreage and number of trees by county, variety and year set. But, of equal importance, the inventory was designed for quick and economical updating. Since that time, the production area has been resurveyed each second winter - 1968 through 1980 to determine changes.

Photographing begins in November when weather conditions are most favorable and is generally completed in 80 to 90 days. The same three-mile-wide flight lines established in 1966 are photographed on each succeeding flight. Approximately 14,000 square miles of photography is obtained at a 1 to 30,000 scale.

The latest survey shows there were 845,283 acres of commercial citrus as of January 1980. This is a net increase of 1.7 percent from the 831,235 acres in January 1978. New citrus groves set during the calendar years of 1978 and 1979 totaled 39,973 acres which more than offset the 25,925 acres lost. This is the first net increase in acreage since the 1970 survey. The net increases occurred in the East Coast and Lower Interior growing areas.

In addition to enumerating total changes in grove acreage, the surveys since 1976 were designed to give more detail on acreage removals and additions. As in past surveys, the 1980 results showed that about one half of the newly planted equivalent acres were resets in existing groves. Another 25 percent of the new plantings were on new land never before used for citrus. Again, as in past surveys, about 17 percent of the lost acreage occurred because of commercial development with the majority of the loss (58 percent) occurring as vacancies in existing groves.

Florida, all citrus: Acres in commercial groves as of January, 1966 - 1980, with percent changes

| Year | Acres | Percent | |
|------|---------|-----------------------------|-------------------------|
| | | Change from previous survey | Change from 1966 survey |
| 1966 | 858,082 | - | - |
| 1968 | 931,249 | +8.5 | +8.5 |
| 1970 | 941,471 | +1.1 | +9.7 |
| 1972 | 878,019 | -6.7 | +2.3 |
| 1974 | 864,098 | -1.6 | +.7 |
| 1976 | 852,369 | -1.4 | -.7 |
| 1978 | 831,235 | -2.5 | -3.1 |
| 1980 | 845,283 | +1.7 | -1.5 |

1980-81 VALUE OF SALES, PRICES AND EXPORTS

VALUE

The preliminary on-tree value of the 1980-81 citrus crop is \$1,022,455,000. This is only slightly less than the 1979-80 season revised value of \$1,037,050,000.

Preliminary value is based only on that part of the crop that was priced at harvest, about 30 percent. When all participation plans are finalized, a revised value will be calculated.

The 1980-81 season average on-tree price of oranges was \$4.46 per box, an increase of 74 cents over the revised 1979-80 average of \$3.72. Grapefruit prices rose to a record high \$3.65 per box from the slightly revised 1979-80 price of \$3.31. Most specialty crops, although reduced by the freeze, also showed an increase in per box returns.

The delivered-in price for all priced fruit going into FCOJ was \$.99 per pound of solids, 16 percent greater than last season's \$.85.

Florida, all citrus: Value of sales on-tree, crop years 1971-72 through 1980-81

| Crop year | Value 1,000 dollars | Crop year | Value 1,000 dollars |
|-----------|------------------------|------------|------------------------|
| 1971-72 | \$427,245 | 1976-77 | \$ 529,765 |
| 1972-73 | 394,645 | 1977-78 | 848,680 |
| 1973-74 | 359,388 | 1978-79 | 966,916 |
| 1974-75 | 397,066 | 1979-80 1/ | 1,037,050 |
| 1975-76 | 440,326 | 1980-81 2/ | 1,022,455 |

1/ Revised. 2/ Preliminary.

COUNTY PRODUCTION

Estimates of citrus production by counties were prepared from objective survey data obtained from the citrus crop estimates program. Production for Florida has been distributed to counties based on the biennial citrus tree census, limb count survey data adjusted for dropage to end of season, and size data at maturity.

Tree numbers by county which are used in the estimates were obtained from the latest tree census. Data on production is obtained from several objective fruit surveys: limb count and size and dropage samples. Because of the statistical sampling design, counties with higher production in general have a greater number of fruit samples, and therefore estimates for these counties can be considered more reliable. Thus, for the same reason, estimates for the production areas are still more reliable.

PRICES

All on-tree prices reported by the U. S. Department of Agriculture's Statistical Reporting Service and the Florida Crop and Livestock Reporting Service represent the average price received by growers for their fruit by types. Prices are based on records of commercial fresh fruit and processed fruit returns. The term "on-tree" relates to fruit value before it is picked and hauled from the grove.

Each season, beginning with the first month that three percent of a fruit type is harvested, the Florida Crop and

Livestock Reporting Service estimates an average monthly price. Fresh fruit sales organizations provide the average F.O.B. price and processors supply an average spot and cash price for fruit delivered to plants. From these values, an estimated charge for picking, hauling and packing is deducted to arrive at an on-tree price. The anticipated box utilization for the month is used to combine the fresh and processing price to obtain an average price for all methods of sales for each month. At the end of the season, monthly price averages are computed and weighted by boxes utilized, to provide the preliminary season average price.

A year later, after most processed products are sold, a survey of cooperatives and firms with market participation plans is conducted to establish a value of fruit previously classed as non-priced fruit. These prices, combined with spot and cash prices collected earlier, are weighted together to determine the final processing price received by growers for various varieties of citrus. Charges for picking, hauling and packing, as determined by University of Florida economists, are deducted from the weighted average of prices obtained from all segments of the citrus industry to arrive at the final on-tree price received by growers.

FOREIGN EXPORTS

Fresh exports of citrus to countries other than Canada and Mexico for the 1980-81 season were 10,589,000 cartons, only slightly more than the 1979-80 season when 10,454,000 cartons were shipped. Orange exports increased slightly from the previous season but are still below most preceding seasons. As in previous seasons, Puerto Rico was the largest receiver of Florida oranges. Japan and Germany also took oranges in quantity.

Tangerines accounted for the major specialty crop exported with most of these going to Puerto Rico. Other varieties were not exported in quantity because of the freeze.

Grapefruit again accounted for the majority of citrus exports, 97 percent, with Japan the principal receiver. Over 60 percent of all grapefruit exports were to Japan with France taking slightly less than 20 percent and Holland slightly more than 10 percent.

Florida exported 11.4 million gallons of FCOJ at 45 degrees Brix in calendar year 1980, very close to 1979 exports. Canada continues to be the largest receiver for U.S. produced concentrate.

Increasing Brazilian production of FCOJ limits export market expansion opportunities for U.S. produced concentrate.

Citrus box weights: Approximate net weight in pounds by fruit type and States

| States | Oranges and others 1/ | Grape- fruit | Tange- rines | Lemons | Limes |
|------------|--------------------------|-----------------|-----------------|--------|-------|
| Florida | 90 | 85 | 95 | 90 | 80 |
| California | 75 | 65 | 75 | 76 | -- |
| Texas | 85 | 80 | -- | -- | -- |
| Arizona | 75 | 64 | 75 | 76 | -- |

1/ Includes Florida Temples and Tangelos at 90 lbs.

Florida citrus: Production of all citrus since 1886-87

History of Florida's Citrus Industry

The citrus tree is a native of the Orient. From this area it was carried ever westward by man, to India, to the Mediterranean and on across the Atlantic. Citrus was brought to the Americas by Columbus. When he landed on November 22, 1493, he brought citrus seeds that were planted on the island of Haiti. The first seeds planted on the mainland of the Americas were brought by the expedition of Juan de Grijalva when he landed in Central America between July 12 and July 20, 1518. The exact date of the introduction of citrus trees into Florida is not known, but from a statement made by Pedro Medendez, dated April 2, 1579, it appears that citrus fruits were grown in abundance around St. Augustine at that time. Early settlers in Florida some two centuries later found wild citrus trees scattered over the state. One of the oldest, cultivated groves planted in Florida (Hume, 1926 p. 95) is thought to be the Don Phillippe grove in Pinellas County, planted some time between 1809 and 1820.

Citrus production in Florida had reached an all time high of more than 5 million boxes when the Great Freeze of 1894-95 almost totally wiped out the citrus industry. It was not until 1909-10 that this level was reached again. Since that time the volume steadily increased. As the decade of the seventies began, Florida's dominance of the Nation's citrus became even more apparent. In 1980-81, Florida had 69.1 percent of the Nation's production.

Footnote 2/ for page 34, 1/ for pages 35 and 36. Final Mexico import shipments to the U. S. are reported by FAS as a combined total for oranges and tangerines. The total shown on pages 34 thru 36 has been broken down proportionally into oranges and tangerines from Plant Quarantine data reported at the time of the crossing. Plant Quarantine releases gave separate totals for these two types of citrus. Mexican shipments exclude Canadian shipments.
